Hi, Gary. I wanted to circle back with you on a couple matters. Regarding the non-municipal land disposal site operating regulations you forwarded, I discussed with Sean Sheldrake, and other than the leachate reg. he felt the other regulations could be relevant to operation of the CDF so we have added them to the ARAR chart. Attached is the ARAR chart for your information. Yesterday, DEQ should have gotten this chart, several other updates to Chapter 2 to the FS and notice that our modifications to chapter 3 of the FS were on the FTP site.

The other matter is DSL and their position on charging fees for remediation caps if uses may be restricted. I've not heard directly from anyone in your office or DSL to further discuss the matter. I believe you might have told me, but who in your office is representing DSL on this issue?

Given that the entire revised FS will be available soon (Chapter 4 will be provided August 7th) I think it would be useful for DSL to review the criteria EPA is proposing for when caps may be appropriate and when they are not. Current or reasonably anticipated future use is a significant factor whether caps maybe used and/or at what depth they must be. I think that should greatly diminish restrictions on commercial, water –dependent uses.

EPA is willing to meet and discuss this issue and other issues they may have. Thanks.
